## LOCALLY MANUFACTURED ARMoured VEHICLES

South African company AVS introduces its range of Milcat light armoured vehicles, that is unique in its category.

Situated in Gauteng, AVS was born out of a group of companies that specialise in the design and manufacturing of armoured vehicles. Out of this wealth of experience and continued support, we offer our clients various armoured vehicle solutions, specialising in rentals specifically.

We offer quick deployment of our vehicles and constant support by working closely with our clients and their management in order to ensure, as best as possible, the smooth and reliable operation of our vehicles.

AVS believes that the Milcat is the perfect solution for any company looking for a purpose-built armoured vehicle to fulfill their security requirements specifically in mining and rural areas.

**Company Profile**

## AVS specialises in armoured vehicle rentals.

### Why rentals?

- You can get access to quality armoured vehicles, on short notice, without having to make a large upfront investment.
- You enjoy ongoing support from AVS when it comes to the management and maintenance of your vehicles as well as any potential breakdowns. This helps you keep your operation running smoothly.
- It shifts a large portion of the risk away from your company by not owning the vehicle. It can be extremely difficult and expensive to insure an armoured vehicle. Let AVS help you carry the inherent risk of operating a security vehicle.
- There can be many unforeseen costs when it comes to owning and operating an armoured vehicle. By renting a vehicle from AVS you can limit these unforeseen costs, allowing you to stick more closely to your intended budget.

We know our vehicles best, let us manage them so that you can focus on your operations.

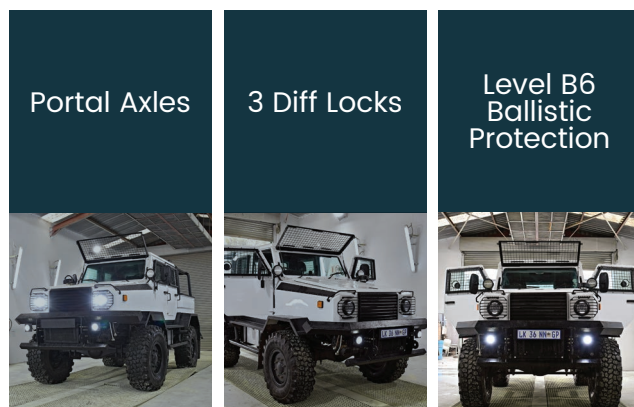

The Milcat offers supreme reliability, protection and mobility. AVS has two models:

- **Milcat 5-seater Bakkie**
- **Milcat 7-seater Closed Canopy**

Each with its own unique variants. These variants include drone command units for both models.

The Milcat is based on a light truck, ensuring that all the components of the drivetrain are designed to handle the constant weight of the armoured body under all circumstances. This makes the Milcat quite unique when compared to most uparmoured commercial vehicles, many of which can exceed their GVM when fully loaded. With a GVM of 7 700kg, the Milcat has a loading capacity of between 2 400kg and 1 400kg depending on the model and variant.

About us

The Milcat features level B6 ballistic protection, which protects up to and including standard assault rifles. The body offers 360° of protection to the occupants.

The Milcat is a permanent AWD vehicle and comes standard with 3 diff-locks (Front, Middle and Rear). The vehicle also boasts portal axles, which allows for increased ground-clearance. All these features make the Milcat an extremely capable off-road vehicle. This comes in handy in many situations but especially on mines when rain can cause gravel roads, specifically the perimeter roads, to become a problem. Even though it is an extremely capable off-road vehicle it is also at home on any tar road or in any urban setting.

The Milcat has a proven track record of reliability and practicality and has been successfully deployed across South Africa. It is a proudly South African vehicle, manufactured in-house at AVS's manufacturing facility east of Pretoria.

### SIZE COMPARISON: AVS Milcat vs Toyota Hilux

For those seeking a reliable solution when it comes to armoured vehicles, consider partnering with AVS.
